For electric bus fleets, Verdek offers a line of charging stations designed for both **overnight** and **opportunity** charging.

These systems can be configured based on your preferred charging session length, daily range requirements for your fleet, and your operation floorplan.

## Maximize Downtime

Optimize time spent while buses are stationed by taking advantage of a longer potential charging session. This reduces overall charging costs while ensuring your fleet can operate tomorrow without stopping.

## Seize the Opportunity

Maximize charging opportunities during brief downtimes, such as a bus line terminus or driver swap, and keep services going without interruptions.

## Automate Your Charging

Focus your workforce by leaving the charging up to the equipment. Our bus charging systems are fully automated and will charge vehicles in sequence, continuing onto the next EV when the current session completes.
