NEW ITALIAN ELECTRIC VEHICLE, TAZZARI ZERO, MAKES ITS US DEBUT AT NASA

Unique And Stylish NEV Ready For Import With DOT Certification

www.VERDEK-EV.com

ROME, Georgia, March 16, 2010 – The first Tazzari ZERO, a neighborhood electric vehicle (NEV) designed and manufactured in Italy and powered by state-of-the-art lithium-ion batteries that provide a range of 88 miles on a single charge, was recently shuttled into the US by Verdek-EV, its exclusive North American distributor.

Touchdown for the Tazzari ZERO was at none other than NASA headquarters near Houston where Venta and EVCARCO, Verdek's strategic partners presented the ZERO to some of the top technical experts at NASA (<http://www.youtube.com/watch?v=Qj1NH3ldkfy>). NASA technicians are very familiar with weight management, so they were particularly interested in the ZERO's lightweight aluminum frame that makes the structure very rigid while increasing its range and performance.

After NASA, Tazzari ZERO will head to New York and Los Angeles for several media opportunities. The car is an experience for everyone who drives it or even sees it; the consumer will recognize that this is something very different and available now.

Guy Maninno, Verdek's CEO, said, "The plan for the Tazzari ZERO is simple; let the car speak for itself. The public really understands that this is a new way of driving, thinking and looking at transportation."

"The ZERO will be priced in the low 30's and comes from the heart of the Italian sports car region," stated Dale Long, CEO of EVCARCO. "The days of the electric car not being available are over; the days of poor quality and unreliable technology have past. Tazzari ZERO is an innovation on four wheels."
