The Launch Of Our New Website

Level 2 Residential

We are proud to announce the launch of our new website. We offer more information on the products and have more pictures and links to videos with past and present news coverage. Also we have downloadable brochures for all of our products. Pls check our full range of Coulomb charging stations for public, residential and fast charging solutions. This will hopefully make our website more user friendly. We have created a "Communication" section including PR, Photos, Videos and Newsletters to keep you posted of our progresses. We are committed to promote green technologies and sustainable solutions for a cleaner environment.

Our brand new website features links to our two facebook and twitter pages, with weekly updates this will hopefully target the younger crowds that are more aware of a green cleaner future. We are continuously expanding our product range in a very integrated way. Our newest additions are solar panels. We see more and more covered parking structures with solar panels in some cases, especially in the Southern States such as Texas and Oklahoma also wind generation can be integrated to solar for a continuous power generation and charging stations perfectly fit with these structures in a sustainable solution for transportation. Now that the GM Volt and the Nissan Leaf are in full production and we start seeing them on the roads, it is time to get a reliable charging infrastructure in place.

Thank you for your time and we hope doing business with you in the future.

Sincerely,

Guy Mannino
Verdek
