There is an app for you

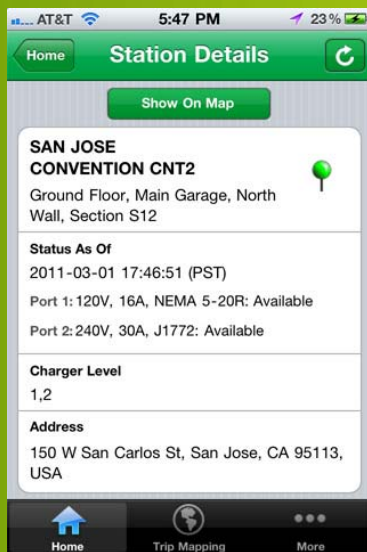

Coulomb Technologies now offers new features for its ChargePoint smart phone apps for Blackberry and iPhone. Download the free app in the iPhone and Blackberry app stores. The ChargePoint® App is the only app available that gives electric vehicle (EV) drivers real-time charging station status. The new version allows drivers to search and filter for charging stations by status: available, in use, voltage level, and paid or free stations. The smart phone apps provide an easy and mobile way to access the world's largest EV charging network service with features that allow an EV driver to find stations near any specified address, get turn-by-turn directions, and even start and stop a charging session directly from their smart phone.

Find and reserve a station

And now you can also reserve an available charging station through your PDA. Just key in your arrival and departure time. Our ChargePoint Network will have the charging station available for at your arrival time.

Reservations made as easy as 1, 2, 3

- Drivers search for reservable charging stations at <http://www.mychargepoint.net>.
- Drivers can easily make a reservation once signed into their [ChargePoint Driver Account](#).
- Upon making a reservation, the driver is billed the station owner-determined fee.
- By using their ChargePass™ card, drivers have unlimited charging station access privileges during their reserved charging session time.
- Reservations may be canceled by the driver up to 24 hours prior to the start of the reservation.

Data available from your PDA

Users can receive charging session information including: real-time charging status notifications, energy used, greenhouse gas savings and time usage. The ChargePoint App is also now available for ChargePoint Network service in Australia. Additional new features include the ability to:

- View charging station configuration (voltage/current/connector)
- View price to charge and total cost of a session after completion
- View your home ChargePoint station
- View the app in landscape mode
- View a list of nearby stations within 1000 feet radius
- View your ChargePass account information

Some features require a ChargePoint Network driver account with an activated ChargePass™ card.

New Installations

New Mexico is the latest state to join the ChargePoint® Network. Albuquerque is the first city in the state to provide electric vehicle charging services with the installation on two ChargePoint® networked charging stations for electric vehicles (EV). The stations are located in the heart of downtown Albuquerque at 498 3rd

Street NW and are open to the public.

A placeholder for a deleted image, consisting of a white square with a dashed border and a large 'X' drawn across it. The text 'Image Deleted' is written in red in the center of the square.
